

Smart Net from SNS.

Smart Net. Secure multi-site data connectivity from SNS

Smart Net gives businesses with operations in multiple locations secure data and internet access – backed by options to enhance security and to suit different budgets.

Benefit from dedicated, secure data / internet access for your business, with a managed service offered by SNS. Smart Net is ideal for SMEs seeking redundant connections, or to connect a multi-site footprint.

Select the security level you need and depend on SNS - or take control with self-management options. Our experts will help you choose the best configurations, with low latency for cloud connectivity. A Console Server option for disaster recovery is also available – so your business can be protected, whatever happens.

Flexible connectivity options

We offer a range of packages, with add-ons to tailor your solution. We can also combine fixed internet connectivity with LTE backup options to ensure continuity of service, with cost-effective subscription models.

A range of firewall solutions is available, as well as specialist support to tailor requirements to your business.

Options available for Smart Net include:

- 1G or 10Gbps connectivity
- LTE backup
- Fixed public IPv4 or v6 addresses
- Remote or on-premise firewall
- Enhanced security – URL filtering, IDS, AV
- SNS or Self-managed security
- Custom engineering
- 1 or 3-year contracts
- SLA-backed services
- Agile, responsive support

By selecting SNS, you can obtain premium connectivity at price levels that smaller businesses can afford – even with a multi-site footprint.

“Many businesses struggle to get the connectivity and security they really need – SNS acts as a single supplier, bundling internet access and threat protection into convenient packages, at affordable prices”

Nicola Berardoco

CEO, Swiss Networking Solutions

Disaster recovery with SNS Console Server

Our console – or terminal – server solution provides resilient, secure backup connectivity for disaster recovery, with interconnection to your data centre. It provides 1Gbps access, with a terabyte data allowance, and offers LTE access to ensure connection in any eventuality.

Access is completely controlled, with policies set by your business, so only authorised users can access your data and resources remotely. SNS provides and manages the connectivity, while you provide your own terminal server, ensuring the highest levels of security.

Get the right connectivity for your business

Our services are backed by SLAs and performance guarantees, giving you premium connectivity with the flexibility to tailor packages to your needs. SNS offers a true partnership for your business.

So, not only do you get connectivity, but you also get peace of mind, across all your sites.

What's different about our services?

SNS builds global connections, optimised for real-time mobile services. Secure from the ground up, you also benefit from QoS management and encryption across private routes, with full traffic segregation.

As an agile partner, we solve connectivity challenges, based on proven methodology and experience, enabling you to grow your IMSI sponsor network.

We'll get you to market quickly, with a reliable, responsive team that understands how to build complex network connections, end-to-end.

- Tier-1 reliability and performance
- Full control, end-to-end
- Integrated, secure and cost-effective

Smart Net from SNS

Full-service internet access, with packages for 1 or 10Gbps connectivity – and single or multi-site data access, backed by a full suite of security options.

Console server access

The Console Server provides cost-effective disaster recovery solution with wireless backup, enabling remote access to your terminal servers.
